

## **Aurubis Bulgaria Summer Internship Programme has been launched**

At the beginning of July, Aurubis Bulgaria launched the Summer Internship Program 2023. This year the company welcomes 26 interns, including 12 university students and 14 high school students. Most of them have already started their internship while the rest will join the program in August. The areas where the interns are assigned include the four main production areas, Maintenance, Engineering, Automation, Testing and Grading, Energy, Research and Development, as well as business units such as Finance, Procurement, Sales, IT, Human Resources, etc. During their internship at Aurubis Bulgaria, the students will work on various projects with the support of their mentors, each one of them a professional in their field.

The young people will have the opportunity to learn about the company's activities and acquire new knowledge and skills, both in theory and in practice. This internship gives them the chance to experience a real working environment, which would support their career orientation and future professional realization.
