

CuMg0.1

20 04

Comparable standards: UNS C15500 • JIS C1550

Aurubis designations: C155 • PNA 297 • C155

Description

CuMg0.1 is an alloy hardened by the addition of magnesium. It shows increased strength and very good electrical conductivity (min. 86% IACS). Magnesium increases the wear resistance of copper, as well as the thermal stability and relaxation properties.

Fields of application are components of electrical engineering, connectors and leadframes.

Composition

Cu	Mg	P	Ag
[%]	[%]	[%]	[%]
min 99.75	0.08-0.13	0.04-0.08	0.027-0.1

Composition of this alloy is in accordance with RoHS for electric & electronic components and ELV for the automotive industry.

GW bend axis transverse to rolling direction. BW bend axis parallel to rolling direction.

Fabrication properties

Cold formability	excellent
Hot formability	excellent
Soldering	excellent
Brazing	excellent
Oxyacetylene welding	not recommended
Gas shielded arc welding	not recommended
Resistance welding	fair
Machinability	not recommended

Electrical conductivity

The electrical conductivity depends on chemical composition, the level of cold deformation and the grain size. A high level of deformation as well as a small grain size decrease the conductivity.

**Corrosion
Resistance**

CuMg0.1 is resistant to: Natural and industrial atmospheres as well as maritime air, drinking and service water, non oxidizing acids, alkaline solutions and neutral saline solutions.
CuMg0.1 is not resistant to: Ammonia, halogenide, cyanide and hydrogen sulfide solutions and atmospheres, oxidizing acids and sea water (especially at high flow rates).

Typical uses

Components of electrical engineering, connectors, lead frames
